# Let's Learn About Invasive Species and How to Prevent Them From Harming Our Lives!

## What Are Invasive Species?

Creatures that are brought into places where they did not originally exist — as food, pets, or hidden in containers of imported goods. They can cause damage to crops and negatively impact ecosystems.

### Invasive Species in Kobe:

#### Red-necked Longhorn Beetle (*Aromia bungii*)

**Appearance:** About 3-4 cm in length, with a red neck, and a glossy black body.

#### Asian Long-horned Beetle

#### (*Anoplophora glabripennis*)

**Appearance:** About 2-3.5 cm in length. The wing base is glossy, and the body has white markings.

### These pests cause extensive damage!

**Its larvae feed on and kill trees.**

\*If you find either type of beetle, please report it to Kobe City!!\*

### To learn more, visit the Invasive Species Exhibition Center!

Japan's only public facility dedicated to the issue of invasive species. Explore interactive exhibits featuring educational videos, quizzes, and other fun and engaging games!

In-house specialists are also available to offer clear, easy-to-understand explanations.

## Raccoon (*Araiguma*) - A crafty food connoisseur that wreaks havoc on crops!

Invasive species

Precautions:

- \*Prevent raccoons from entering into your home, and eliminate their nesting spots.
- \*Never feed raccoons.
- \*Raccoons may carry transmittable diseases! Be sure to wear a mask and rubber gloves when cleaning up feces or urine.

## Wild boar (*Inoshishi*) - Feeding them is strictly prohibited, as they can become accustomed to humans!

Precautions:

- \*If a wild boar approaches to you, remain calm and slowly back away.
- \*If the boar shows signs of aggression, drop your bag or belongings away from your body to distract it.
- \*Never feed wild boars.
